Disclosures Required By The Wireless Carrier:

Regardless of whether Customers Service includes wireless data communications, Customer acknowledges and agrees that if Customer

has purchased wireless services from Supplier (e.g. for vehicle tracking), the underlying wireless service carrier has obligations only to Supplier, and not to the Customer, that Customer shall not be deemed a third-party beneficiary under any contract between Supplier and the underlying wireless service carrier, and that Customer is bound by the following provisions:

(a) Subject to Industry Canada, FCC, and other applicable number portability rules, Customer has no property right in any number assigned to Customer, and any such number can be changed from time-to-time.

(b) Customer acknowledges that Service may be temporarily refused, interrupted, curtailed or limited because of atmospheric, terrain, or other natural or artificial conditions, over-usage, relocation or repairs. Customer agrees that the underlying wireless service carrier shall not be responsible for such interruptions of Service or the inability to use the Service outside the territory. Customer understands that the underlying wireless service carrier cannot guarantee the security of wireless transmissions and will not be liable for any lack of security relating to the use of the Service. In no event shall the underlying wireless service carrier be liable for any cost, delay, failure or disruption of Service, or consequential damages. Customer shall use devices at their own risk.

(c) Customer will indemnify, defend and hold the underlying wireless service carrier and officers, employees and agents of each of them harmless from and against all claims, causes of action, losses, expenses, liability or damages, and including without limitation for any personal injury or death, arising in any way directly or indirectly in connection with this Agreement; the provision or use of Services; or use, failure to use or inability to use the number. This provision shall survive termination of this Agreement.

(d) Customers Service may be temporarily suspended or permanently terminated upon little or no notice in the event (where applicable) that Supplier's agreement with the underlying wireless service carrier is terminated. Customer waives any and all claims against the underlying wireless service carrier for such suspension or termination.

INTRODUCTION

The FarmTRX System is equipped to publish data to Climate FieldView™ via the FieldView™ Drive. Compatibility with FieldView™ is available for farmers who have yet to purchase, or are already running, the FarmTRX Yield Monitor by purchasing additional hardware. The required hardware for connecting to FieldView™ varies depending on whether you are operating the Yield Monitor 1.0 or 2.0.

This guide will outline the hardware requirements for FieldView™ compatibility for both Yield Monitor 1.0 and 2.0, ways to determine which Yield Monitor you are operating and the necessary steps to getting setup for FieldView™ compatibility.

HARDWARE REQUIREMENTS

Directions for Yield Monitor 1.0 Operators:

Yield Monitor 1.0 Power Unit

1) Consult the Yield Monitor Power Unit (black box) to confirm it is version 1.0. If the power unit features the above label, has a connector for the Primary Wiring Harness and the GPS Antenna then it is a Yield Monitor 1.0.

If the power unit features a status LED on the upper right corner of the front face, it is a Yield Monitor 2.0. Skip ahead to **Directions for Yield Monitor 2.0 Operators**.

2) Navigate to the FarmTRX Shop to purchase the FieldView™ Compatibility Kit. This kit contains:

1. Yield Monitor 1.0 Primary Wiring Harness with CAN Adapter (P/N 11111-2)
2. FieldView™ Drive Cable (P/N 11216-1)

3) Confirm your Yield Monitor is hardware version 1.06 by:

1. Connecting to the Yield Monitor via the FarmTRX Harvest App
2. Navigating to the Advanced Settings page under Main Menu
3. Look under System Info – if the hardware version of the Yield Monitor is 1.03 or 1.04 you will need to contact FarmTRX Support at support@farmtrx.com (1-800-991-5136) to get set up with an upgrade.

Directions for Yield Monitor 2.0 Operators:

Yield Monitor 2.0 Power Unit

1) Consult your Yield Monitor Power Unit to determine if it is version 2.0. The power unit will feature the above label and an LED light on the front face. If it does not, refer to **Directions for Yield Monitor 1.0 Operators**.

2) If you own the Yield Monitor 2.0, you will already have the Primary Wiring Harness compatible with the FieldView™ Drive Cable. You will need to purchase one piece of additional hardware, this is an optional add on at checkout:

1. FieldView™ Drive Cable (P/N 11216-1)

Information for Yield Monitor 1.0 and 2.0 Operators:

Ability to connect to Climate FieldView™ from the FarmTRX System requires the user to own a Climate FieldView™ Drive available for purchase through Climate.

All users must ensure they are running version 4.11 or later of the FarmTRX Harvest App in order to connect to FieldView™.

STEPS TO FIELDVIEW™ COMPATIBILITY

Setup the FarmTRX Harvest App

1) In the FarmTRX Harvest App, perform a sensor calibration under the Device Calibration screen. The calibration will record the dimensions of your clean grain elevator paddles. This should be completed once per season or if you swap or tighten your elevator chain.

2) Set the Time Delay in the FarmTRX Harvest App by navigating to the Device Calibration screen and tapping Edit Delay under the Processing Time Delay section. This is the time it takes for grain to travel from being cut to passing the elevator sensors, typically 10-14 seconds depending on the harvester.

- 3) Set the header width in the FarmTRX Harvest App by navigating to the Add/Edit Headers page.
- 4) Confirm the test weight of the active crop is the same in both applications. In the FarmTRX Harvest App, navigate to the Add/Edit Crops page, edit and change the weight if needed.
- 5) If you are a new FarmTRX user, perform a crop calibration to ensure accurate live yield readings. Navigate to the Crop Calibration page and follow the on-screen directions.

Setup the FieldView™ Cab App

- 6) Setup your farm equipment in the FieldView™ Cab App by clicking to Equipment from the main menu, then Add New Equipment. The FieldView™ Drive and FieldView™ Cab App do not receive header heights from FarmTRX.
- 7) Set a Flow Sensor Lag to match the delay in FarmTRX.

Connect the FieldView™ Drive and FieldView™ Cab App

- 8) Open your device settings to Bluetooth®, click Connect when the FieldView™ Drive is detected
- 9) Open the FieldView™ Cab App, go to Settings > Devices > Tap to Connect
- 10) When a green checkmark appears indicating successful connection, activate the combine under Equipment> Locate Combine > Set Active
- 11) Select the field and activate by navigating to Maps > Select Field > select the field to activate
- 12) Set the crop type within the Harvesting Crop box. If the box does not automatically appear tap Harvesting Crop
- 13) Begin harvesting!
